Bryce Dougherty
@bd452

- Developing for Jailbroken devices for about a year
- Developing for iPhones for about a year
- Made a few things
  - TapTapPass
  - ByPass
  - libPassword
  - Peekly+ (with Max Katzmann)
- Currently working on Zen Notifications (more on that in a moment)

libPassword

- Library for the iOS passcode
- Allows for the creation of tweaks like ByPass and TapTapPass in a few lines of code
- Currently has 3 functions:
  - Locking with/without password (TapTapPass)
  - Unlocking with/without password (ByPass)
  - Toggling the password on and off
- Will eventually have functions to accept multiple passcodes, detect certain codes, and much more

Zen Notifications
